JSONx, an XML Encoding for JSON
draft-rsalz-jsonx-00.txt

Abstract

   This document specifies a mapping between JSON (RFC 4627) and XML.
   The mapping maintains a high degree of fidelity. It is used by
   several IBM products.

Status of this Memo

   This Internet-Draft is submitted in full conformance with the
   provisions of BCP 78 and BCP 79.

   Internet-Drafts are working documents of the Internet Engineering
   Task Force (IETF). Note that other groups may also distribute
   working documents as Internet-Drafts. The list of current Internet-
   Drafts is at http://datatracker.ietf.org/drafts/current/.

DataPower Gateways   Version 7.1.0 ∨

JSONx

JSONx is an IBM® standard format to represent JSON as XML. The appliance converts JSON messages that are sp
The appliance provides a style sheet that you can use to convert JSONx to JSON.

JSONx conversion rules specify how a DataPower® service converts a JSON structure to JSONx (XML).

The DataPower appliance provides the default `jsonx2json.xsl` style sheet for converting JSONx to JSON. This

➡ **JSON as JSONx in a conversion action**
   This topic describes how to use JSON as JSONx when it is not the request type or the response type of a serv

➡ **JSONx conversion rules**
   A DataPower appliance applies rules when converting JSON payloads to JSONx.

➡ **JSONx conversion example**
   This topic introduces a JSONx conversion example.

➡ **JSONx schema validation**
   How to validate JSONx.

UMMM, YES I HAVE A QUESTION...

WTF?

http://crooksandliars.com/files/imagecache/node_primary/primary_image/16/11/wtf-meme.jpg

quickmeme.com

In all seriousness..

```
commit a570c98d7fa0841f17bbf51d62d02d9e493c7fcc
Author: Andrew Dunstan <andrew@dunslane.net>
Date:    Fri Mar 29 14:12:13 2013 -0400

    Add new JSON processing functions and
    parser API.
```

```
pg_parse_json();
```

```c
JsonLexContext    *lex;
JsonxState        *state;
JsonSemAction     *sem;

text *json = cstring_to_text(json_text);

sem = palloc0(sizeof(JsonSemAction));
state = palloc(sizeof(JsonxState));

sem->semstate = (void *) state;

lex = makeJsonLexContext(json, true);

pg_parse_json(lex, sem);
```

```c
JsonLexContext  *lex;
JsonxState      *state;
JsonSemAction   *sem;

text *json = cstring_to_text(json_text);

sem = palloc0(sizeof(JsonSemAction));
state = palloc(sizeof(JsonxState));

sem->semstate = (void *) state;
sem->object_field_start = object_field_start;
sem->scalar = get_scalar;
lex = makeJsonLexContext(json, true);

pg_parse_json(lex, sem);
```

```c
typedef struct JsonxState
{
  char *key;
  char *value;
} JsonxState;
```

```c
static void
get_scalar(void *state, char *token,
           JsonTokenType type)
{
  JsonxState *s = (JsonxState *) state;

  switch(type)
  {
    case JSON_TOKEN_STRING:
      s->value = pstrdup(token);
      break;
    case JSON_TOKEN_NUMBER:
      ...
      break;
    default:
      break;
  }
}
```

```
static void
object_field_start(void *state, char *name,
                   bool isnull)
{
  JsonxState *s = (JsonxState *) state;

  s->key = pstrdup(name);
}
```

```
